

# Lindsey Street Update

October 31, 2013

On August 28, 2012, the citizens of Norman voted in favor of a Bond Election to finance the local share of eight transportation/storm water improvement projects. The West Lindsey Street Project was one of the eight projects approved. This past summer, the City in collaboration with the University of Oklahoma Institute for Quality Communities (IQC) held several meetings concerning additional project enhancements. From this series of meetings, along with input from property owners, a number of recommendations were developed which included the addition of a continuous raised center median with mid-block U-turns. The complete list of currently proposed improvements for Lindsey Street, as approved by the City Council, is shown below:

- Widening Lindsey Street from 3 to 4 lanes with additional lanes at intersections
- Major storm water improvements
- New two lane bridge with on-street bike lanes and sidewalks over Imhoff Creek (See Lindsey Street Typical Cross-Section on Imhoff Creek Bridge below)
- Continuous sidewalks on both sides of the street
- Triple landscape canopy including raised center median (See Lindsey Street from 24<sup>th</sup> Avenue SE to Berry Road Typical Cross-Section below)
- Better access management for adjacent properties
- Multi-modal improvements including on-street bicycle lanes and transit opportunities
- Aesthetic enhancements including decorative pavement, wayfinding and roadway lighting
- Underground utilities
- Accessibility for disabled individuals
- Updated conventional signalized intersections along the corridor including Lindsey/24<sup>th</sup> Avenue SW, Lindsey/McGee Drive, Lindsey/Wylie Road and Lindsey/Berry Road.

# Lindsey Street Update
