## SUMMARY OF NOVEMBER WATER QUALITY SAMPLING

Sampling for November 2017 occurred on the first and was considered a base flow collection. Water samples were collected at six locations, with the exception of JB-1, TG-1, WC-1, and URC-2, which were collected on the twenty-first of October. Discharge was not measured this month as a result of low water levels, where the stage measurements were at or below base flow conditions. Mesonet data shows no precipitation occurring on the first, in the 72 hours prior to sampling, or in the 72 hours after the sampling event. Water samples were collected from JB-1, TG-1, WC-1, and URC-2 via autosamplers on the twenty-first of October, and were considered high flow samples. Mesonet data shows 1.47 inches of precipitation on the twenty-first, and no precipitation in the 72 hours before or after the sampling event. The total rainfall amount in Norman for the month of November was 0.09 inches. All water level gages were operational for the month, with the exception of LT-1, which has been removed due to road construction.

Table 3 QA/QC Data Where Subscript 1 Denotes a Level 2 RPD, Subscript 2 Denotes a Level 3 RPD, and Subscript 3 Denotes a Level 4 RPD

Quality assurance/quality control (QA/QC) of the data includes a field blank and duplicate sample from each collection event, and is qualified by the OWRB. Relative Percent Difference (RPD) of the duplicate sample can be categorized into four levels, where Level 1 likely has no QA issues and Level 4 has major QA issues, and should be used with caution.
